

HYDROPHOBIC SAND

SCIENCE SAFETY

PLEASE follow these safety precautions when doing any science experiment.

- **ALWAYS** have an adult present.
- **ALWAYS** wear the correct safety gear while doing any experiment.
- **NEVER** eat or drink anything while doing any experiment.
- **REMEMBER** experiments may require marbles, small balls, balloons, and other small parts. Those objects could become a CHOKING HAZARD. Adults are to perform those experiments using these objects. Any child can choke or suffocate on uninflated or broken balloons. Keep uninflated or broken balloons away from children.

INGREDIENTS

- Colored Sand
- Water
- Waterproof Spray
- Transparent Cup

INSTRUCTIONS

STEP 1: Spread the colored sand onto the cookie sheet.

Describe and classify the sand by its observable properties.

STEP 2: Have an adult spray the sand evenly with the waterproof spray. Mix and spray the sand, several times. Allow the sand to completely dry. Describe and classify the sand by its observable properties.

STEP 3: Fill the transparent cup more than half the way with water. Pour the sand into the water, remove the sand from the water, and observe. Describe and classify the sand by its observable properties.

EXPLANATION

The sand remains dry, even when submerged into the water.

The reason, the waterproof spray makes the sand hydrophobic, or scared of water.

SCIENCE BACKGROUND

Matter is anything that has mass and takes up space. Different kinds of matter exist and many of them can be either solid or liquid, depending on temperature. Matter can be described and classified by its observable properties. Different properties are suited to different purposes.

I CAN STATEMENTS

- ✓ I can plan and conduct an investigation to describe and classify different kinds of materials by their observable properties.
